CLIQR DEVICE MOUNTS

Installation

Your CLIQR adaptor uses special 3M™ VHB tape to secure it to your device.

3M™ VHB tape may NOT bond to some materials, such as silicone, leather, hydrophobic and oleophobic coatings or heavily textured surfaces.

It is becoming increasingly common for phones/devices to have oleophobic coatings on the front and rear glass. Please check with your manufacturer if this is the case before using the 3M™ VHB tape to secure the adaptor to your phone/device. If it is the case, you will need to use an appropriate phone/device case.

We recommend applying the adaptor to polycarbonate, ABS, aluminium or un-coated glass.

Always ensure the application surface is thoroughly cleaned (with the included alcohol wipe) and dry before applying the adaptor. The 3M™ VHB adhesive is a single use adhesive. It is NOT re-usable.

1. Wipe the surface down using an alcohol based cleaning agent. Make sure the residue has evaporated and the surface is dry before applying the adaptor

2. Peel the protective layer from the 3M™ adhesive

3. Position the adaptor on the centre of your device/case

4. Press down firmly on adaptor to achieve a good bond. The tape will achieve maximum adhesion after 24 hours. Ensure you do not use the product before this time. Always test that the tape has bonded securely before use.

Essential Maintenance

Before each use:

- If your CLIQR uses cable ties then ensure the cable ties are secure

- Ensure bolts are secure

- Ensure device is securely attached

- Ensure your mount is securely attached to your vehicle

- Ensure the 3M™ adaptor is secure on your device

- Ensure there are no damaged components

- Ensure the position of the product does not impede the safe use of your vehicle

WARNING

Oxford Products Ltd will accept no liability for incorrect use or fitment.

It is the owner's responsibility to ensure that the CLIQR is attached and fitted in accordance with the instructions so that it does not damage or put at risk the owner or any property of the owner.
